

To: Victor Harris, Montgomery Watson Co.
 From: Bob Sanders, Corps of Engineers.
 Subject: Summary of review meeting of 20 October regarding the Northeast Cape
 Phase II RAAM drafts.

My understanding of the agreements made during the meeting on the Northeast Cape RAAM are as follows. If you disagree with any of this please advise immediately.

Comments by Bernie Gagnon:

1. MW accepts comment. No action required
2. MW will add in table format
3. MW Concur with the comment and revisions will be made
4. MW Concur with the comment and revisions will be made.
5. MW Concur with the comment and revisions will be made.
6. Background concentrations query resolved. No action required

Comments by Bob Sanders:

1. MW will add Data qualifiers
2. MW will add Data qualifiers
3. Photos: CoE has. Comment Withdrawn
4. MW will add Location Maps, preferably like those of the Gambell Report
5. MW will add reference to appendix or a table
6. MW will identify and provide references for the geophysical surveys
7. MW will add explanation of use of the term "non-potable"
8. MW will add a base map explanation and will consider correcting the Topography
9. MW will change wording, perhaps to "reroute" or "divert" stream
10. MW will include the ADEC Action Level Matrices, probably in tabular form.
11. MW will augment description of caging vs. covering as used in the report
12. MW will add comments to text regarding the data needs for excavations
13. Just a comment. No action required
14. MW will better explain the situation, using concept of "provisional" sampling.
15. MW will delete TCLP sampling of vehicles
- 15b: CoE will investigate probability of historical artifacts or interest at the site
16. Both parties concur. No action required
17. MW concurs and will change wording to reflect comment.
18. Parties agree that more comprehensive introductory information will be needed for the EE/CA or RI/FS. No action is required to "correct" or "augment" the January RI introduction. The request for additional data is understood to be in the context of archival information already available as contrasted to specific requests for field or laboratory research. However, future data needs should be kept in mind during all site work.
