**Subject:** Teleconference 8/16

UNKNOWN

Rich,  
Based on our telecon of 8/16 concerning Northeast Cape on St. Lawrence Island, it is my understanding that the Corps is not planning to take surface water samples in surface water bodies located within or adjacent to established contaminated areas. You indicated that the Corps does not recognize that this is a requirement of the FUDS program. You also indicated that there is the potential for these sites to be addressed under the process outlined in the draft 18 AAC 75 cleanup standards regulations for determining alternative cleanup standards for soil. I indicated that demonstrating compliance with water quality standards is consistent with methods 2 and 3 under the draft 18 AAC 75 cleanup standards regulations. I also indicated that an alternative for the Corps is to use matrix levels if data concerning impacts to surface water bodies is not determined.

Please let me know if my understanding of this issue as described above is inconsistent with your understanding of our conversation. Thank you.
